SPECIAL INSTRUCTIONS:

This transmission assembly is for Jeeps previously equipped with a Peugeot 5-speed transmission. This assembly fits Jeeps from the years 1987-1989 with the New Process 207 transfer case. The overall length of the new transmission will be within 1/4" of the original Peugeot. **NOTE:** The transfer case shifter bracket and the crossmember adapter plate may not work on Jeep Cherokees and Comanches. These components can be returned for credit and you may be required to fabricate your own linkage and crossmember.

The new input gear P/N 716096 will need to be installed into the transfer case. Since the AX15 transmission has a .438" shaft stick out past the back end of the transmission, this shaft will need to be shortened to flush to avoid bottoming out in the new transfer case input.

NOTE: The 1987 Jeep YJ did use a thicker flywheel than the 1988 and 89 models. The new bellhousing will not work with this thicker flywheel (1.3125"). You can modify the thickness of the flywheel and or the release bearing; however, we do offer a new flywheel for this 1987 YJ which will also require a new starter.

SPECIAL NOTE: The components packaged in this kit have been assembled and machined for specific type of conversions. Modifications to any of the components will void any possible warranty or return privileges. If you do not fully understand modifications or changes that will be required to complete your conversion, we strongly recommend that you contact our sales department for more information. This instruction sheet is only to be used for the assembly of Advance Adapter components. We recommend that a service manual pertaining to your vehicle be obtained for specific torque values, wiring diagrams and other related equipment. These manuals are normally available at automotive dealerships and parts stores.
